The objectives of these two studies were as follows:

**Study 1: Food effect study**
- To determine if a food effect exists (Study 2).
- To determine if pharmacokinetic parameters are influenced by food (Study 2).

**Study 2: Cabozantinib and Esomeprazole DDI**
- To determine if food effect is eliminated with and without food and with and without esomeprazole.

The authors are grateful for the contributions of Natacha Benrimoh (Medical Writing, Oncology, AstraZeneca) product label, revised.
